DATE MAILED: 01/29/2003

Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

DETAILED ACTION

This is in response to a letter for patent filed on January 19th, 2001 in which claims 1-22 were presented for examination. A preliminary amendment was filed on January 19th, 2001 in which claim 1-22 were canceled and claims 23-57 were added to the letter. Claims 23-57 are currently pending in the letter.

Allowable Subject Matter

1. Claims 23-57 are allowed.
2. The following is an examiner's statement of reasons for allowance:
 - a. Applicant teaches a method and system whereby software piracy can be deterred while copying and purchasing can be encouraged. User to user copying plays an important positive role in the present system, and in the shareware industry, and as "piracy" it plays an important negative role in other shareware- and internet-based marketing schemes. This concept discloses methods whereby software copying and purchasing can be tracked, studied, and rewarded, whereby software lineages can become adapted to their environments. Applicant inventive concept is novel and innovative in the sense that it provides the software product with code portion with a parameter value, a mutation rate, and a set of probabilistic mutation criteria that are used to determine if the operating parameter value should mutate so that the parameter value would change should it be determined that the operating value be mutate. The closest prior art,

Art Unit: 3621

MacLoed et al (U.S. Patent No 6,343,295) teaches an inventive concept that is directed toward database technology that provides users with powerful tools necessary to manage and exploit data. The inventive concept provided a system provides a system and method for tracking the lineage of data within database tables. According to this concept data within the tables are tracked by attaching lineage information to the data, preferably, by adding a lineage identifier to each row in a table. Data that share a common lineage can be identified by virtue of sharing a common lineage identifier. However, MacLoed et al fail to teach a software product with code portion with a parameter value, a mutation rate, and a set of probabilistic mutation criteria that are used to determine if the operating parameter value should mutate so that the parameter value would change should it be determined that the operating value be mutate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

b. *Wiemann (U.S. Patent No. 6,298,317) teach method for functionally simulating and verifying the correctness of a computer program. The method begins by generating a*

mutated computer program which includes a syntactic mutation. The method next pre-processes the mutated computer program to identify the syntactic mutation within the mutated computer program as either a subtle or non-subtle syntactic mutation. If the mutated computer program has a non-subtle syntactic mutation, the functional simulation of the mutated computer program is terminated, and another mutated computer program is generated, as described above. If the mutated computer program contains a subtle syntactic mutation, the mutated computer program is then simulated in an attempt to detect the subtle syntactic mutation within the mutated computer program within a predetermined simulation period. If the subtle syntactic mutation is detected within a predetermined simulation period, the functional simulation of the mutated computer program is terminated, and another mutated computer program is generated, as described above. However, if the subtle syntactic mutation is not detected within a predetermined simulation period, the present invention provides an indication that the subtle syntactic mutation was not detected

c. *Wong et al (WO 98/16882) teach a method and system for continuous software monitoring is provided in which the attributes or parameters of the functional computer program to be monitored are specified at the time the functional computer program is compiled and a monitoring computer program is simultaneously compiled by a compiler for parallel execution in a target computer environment. The functional and monitoring programs are compiled to include links to enable data to be extracted from the functional computer program, the main application, by the monitoring program. The main*

Art Unit: 3621

application is arranged to include a spawn monitor so that each process of the main application which is spawned during execution in the main application processor has its own monitoring process which is spawned in the monitoring processor.

d. *Variar (NPL) discusses the ability to trace the lineage of data on a data warehouse in order to increase users confidence.*
